Good for you.

RENEWABLE ENERGY
SOLAR / PELLET BOILERS
AIR SOURCE / GROUND SOURCE HEAT PUMPS

Feeltheheatuk.com

Save Energy Save Money

Install a condensing gas boiler or oil boiler and save up to 35% on your heating bills. Install a solar system as well and you could save up to 70% off your hot water costs. Have a combined heating and hot water system and you could save even more (dependent on design and type of system).

Pellet boilers can save you up to 20% off the running costs of an oil boiler, add solar and it could be much more.

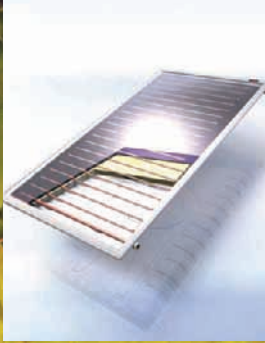

Meet the Expert

We strive to install and design a system that will best suit your needs and your future demands. We will not advise a system that we feel will not work.

We have an ongoing training programme for staff, to make sure they are up to date with the latest technologies.

Clean Heating

Why Choose?

Condensing Grade A gas and oil boilers: We can offer a 5-year manufacturer's guarantee on Worcester gas and oil condensing boilers. We will not settle for less than the best A-rated boilers. This could save you up to 35% off your existing fuel bills, compared with standard boilers.

**GOOD FOR YOU

GOOD FOR YOUR
POCKET !**

Air source heat pump

Did you know ?

With these air source heat pumps for every £1 spent on fuel you get £4 worth of heat. Units are available for domestic and commercial systems. They are best suited to well insulated properties serving hot water and underfloor heating systems.

Pellet Boilers

- the carbon neutral solution.

The use of pellet system fuels can be up to 20% cheaper than standard oil boilers/installations. This is based on oil being 35p per litre. If oil costs rise above this, then the saving will be even greater.

Combine a pellet boiler system with a solar system and the saving against an oil boiler system could be as much as 50%, or even higher dependent on the type of heating and hot water system you choose.
